
Does the alarm flag the wrong deploy decisions? One point per decision; the alarm fires below the diagonal (breakdown Γ < Γ̂)
R1, sort bound
8,764 of 27,810 deploys wrong
alarm precision 0.32 (base rate 0.32), recall 1.00
R2, robust DP bound
9,699 of 25,127 deploys wrong
alarm precision 0.37 (base rate 0.39), recall 0.83
R3, robust DP bound
3,259 of 6,241 deploys wrong
alarm precision 0.52 (base rate 0.52), recall 0.99
search cap Γ = 20
breakdown Γ of the deploy decision
benchmark Γ̂ (strongest recorded variable)
deploy was right
deploy was wrong
